

# KEECRISP™ 'FL06-556' (U.S. PATENT PENDING)

## Southern Highbush Blueberry Cultivar

Field Ratings <sup>1</sup> (1-9)	
Survival	8.3
Berry Size	7.3
Color	6.4
Firmness	9.0
Flavor	7.0

<sup>1</sup>2012-2015

- ◆ Estimated Minimum Chill Requirement: 300 Hours
- ◆ 50% Harvest: Around May 4 (Gainesville, FL)
- ◆ Growth Habit: Upright
- ◆ Fruit Size: Large

Keecrisp™ 'FL06-556' is a low chill, mid-to-late-maturing variety best adapted to production regions in north central Florida and south Georgia. It produces berries with extremely crisp and firm texture. It has an upright plant architecture and has shown to have high yield when receiving adequate chilling. Fruit has a very small and dry picking scar. The extremely crisp and firm fruit texture, upright growth habit, and reduced fruit bruising offer the potential for fruit of Keecrisp™ 'FL06-556' to be mechanically harvested and marketed for fresh.

- ◆ Average Berry Weight (g)<sup>2</sup> 2.6
- ◆ Fruit firmness (g/mm)<sup>2</sup> 266
- ◆ Soluble solids (%)<sup>2</sup> 11.3
- ◆ Titratable acidity (%)<sup>2</sup> 0.17
- ◆ SS/TA Ratio<sup>2</sup> 73.3

<sup>2</sup>Fruit Quality - 2014-2015
